

PROFILE

Graduate Software Engineer with a first-class degree and a background in Python, C#, and Java development through academic, research-led, and personal projects. Proven ability to work in professional software environments, with a strong interest in interactive applications. Looking to move into a junior development role where I can contribute directly to building software.

EDUCATION

BSc (Hons) Computer Science (Software Engineering) - University of Hertfordshire 09/2021 – 05/2024

Grade: 1st Class Honours, 4.0 GPA

Thesis: *Development of a prototype FPS game for the comparison of aim assistance algorithms*

WORK EXPERIENCE

Software Engineer in Test - Cognizant, London 05/2025 – Present

Performing functional and regression testing in regulated, production-grade environments on large-scale systems.

Rapidly onboarded to 6 projects across different teams at HMRC, learning new systems, workflows, and frameworks under strict time constraints.

Collaborating with developers, business analysts, and stakeholders to identify defects and improve system quality.

Exposed to technical tooling such as Git, Selenium, Java, JavaScript, HTML & CSS, Postman, Cucumber, JMeter, and SQL.

Computer Science Proctor - School of Physics Engineering & Computer Science, University of Hertfordshire

06/2022 – 06/2024

First computer science trained member in a select student support team assisting with technical support tasks, introducing the team to new ideas and opportunities.

Developed training resources for Computer Science team members, enabling the addition of 12 new hires.

Gained recognition for effective collaborative work in the Vice Chancellor's Awards 2023 as Team of the year.

Game Design and Research Intern - Adaptive Systems Research Group, University of Hertfordshire 06/2023 – 10/2023

Led independent research into procedural content generation for LARP games using ChatGPT's API and Python scripting, designing and iterating on prompt-driven systems to generate structured game content.

Engineered prompts within a strict 4096 token limit, receiving positive feedback from all playtesters.

Research Assistant - Bioengineering & Instrumentation Research Group, University of Hertfordshire 06/2022 – 12/2022

Conducted materials testing across 100+ samples and reproduced research paper designs as 3D-printed prototypes using Fusion 360.

Python Tutor - Bita Consulting

01/2022 – 09/2022

Managed classroom groups of 15-30 and conducted individual and group online sessions flexibly to cater to different children's preferences and needs.

Led over 40 lessons, supporting students' confidence and problem-solving skills in an open environment.

ACHIEVEMENTS

- Research-based Unity project evaluating three aim assistance algorithms in an FPS prototype, including gameplay implementation and experimental comparison, resulting in a first-class degree dissertation
- Self-built portfolio in HTML/CSS including automated asset migration via web crawler, deployed to GitHub Pages
- Self-developed platformer game in Unity C#, implementing core gameplay systems and mechanics, with full post-mortem documentation
- Go Herts Gold Award for initiative outside of studies

SKILLS

- Python, Java, C#, HTML/CSS, JavaScript, Unity
- Version Control (Git), OOP, Agile, Kanban, Functional Programming
- Teamwork, Communication, Adaptability, Leadership, Project Management, Research
